PROEN Internet Company Information

PROEN Internet Was founded in 1997 in Thailand. The past 14 years has seen the company continuously develop from its initial status of Internet Data Center and has seen it progress towards the Company's corporate goal of being recognized as the one of leading system integrator in Thailand.

PROEN Internet offers system integration ICT services with a range of management and technical skills in order to make information widely accessible. PROEN Internet will help protect an organization's investment in hardware, software and training and enable it to fully realize the technological and business potential of its IT systems.

PROEN Internet has successfully built and maintained some of the most challenging information systems in Thailand for major industries. We are able to operate as the prime contractor, consortium member, subcontractor, or a discrete project manager - according to the needs of the project.

PROEN IDC (Internet Data Center)

PROEN Internet provides communication services from entry level through to gigabit broadband networks which cover every communications need, including wireless systems, Internet, broadband communications, and teleconference facilities. PROEN Internet complete range of communication services enables Thai people to discover a new world of communication and add value to each other's lives.

We employ world class technology to support customer need

PROEN Internet IDC takes care to apply the highest standards of quality to the equipment and environment of its Data Center. In order to provide the required level of reliability and efficiency to earn your trust, we employ only technologies which meet world class standards:

We have installed the Full Monitoring System which checks the operation of every system in the Data Center by combining the Facilities Network system and server. The operational procedures are monitored in detail at the Network Operation Center (NOC), which greatly reduces human error and allows customers to perform their own quality check of their server through the Internet,

Our network employs Full Redundancy to provide parallel operation, implementing the alternative channel immediately if any network component experiences errors. This network service is available at bandwidths from 10 Mbps to Gigabit speeds.

Rack-Based Fully Redundant Power Supply an additional level of reserve power. The room is equipped with a Source Transfer Switch in every rack to minimize impact in the event of power loss.

Carrier Grade Equipment - We select only the best quality equipment which has been specified for use in Internet Data Centers by world class network service providers, such as the CISCO Router CISCO Switch Catalyst 6500 Series, Air Conditioning System and UPS.

Our alliance of strong partners together with the quality of technology, environment and equipment in our world class Data Center ensures that PROEN IDC can protect your network and ICT information just as we do our own valued assets.

In addition to services from PROEN IDC, we can provide comprehensive communication services and solutions to help your business run smoothly.

System Integrator

PROEN Internet is a Thai leading System Integrator and Internet Service provider, located in Bangkok, Thailand. We provide complete ICT solutions, from product supply and applications over turnkey projects to service contracts and outsourcing schemes in both the Corporate and the public sector.

Our mission statement is 'We do for your Success'; our goal is to be your strategic partner with the knowledge and experience to help our clients to achieve their desired business outcomes and to improve business performance through the implementation of clever technology solutions. Through the rapid provision of consultancy, solutions and end-to-end ICT services that are so much needed in today's business environment, PROEN Internet can help to transform your business and make you more efficient and productive.
